No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DB B

HEMOLYTIC ACTIVITY IS OBSERVED FROM 6 TO 37 DEGREES CELSIU MAMMALIAN ERVIFROCYTES.

-I- COFACTOR: Binds 1 zinc ion and 4 calcium ions per subunit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SEQUENCE FROM N.A. FUNCTION: ESSENTIAL FOR SEPTUM FORWATION AND CELL DIVISION FUNCTION: REQUIRED FOR MAINTAINING NORMAL CELL MORPHOLOGY.

IS REQUIRED FOR MAINTAINING NORMAL CELL MORPHOLOGY.

CATALYTIC ACTIVITY: UDP-N-accetyl-D-glucosamine + {(1,4)-(N-accetyl-beta-D-glucosaminyl)}(N) = UDP + {(1,4)-(N-accetyl-beta-D-glucosaminyl)}(N+1).

ENZYME REGULATION: REQUIRES PROTEOLYTIC ACTIVATION.

SUBCELLULAR LOCATION: Integral membrane protein.

SIMILARITY: BELONGS TO THE CHITIN SYNTHASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                YEAST
